

About us

Orpheus Cyber is an innovator and market-leading, award winning threat intelligence and cyber risk rating company.

Our Approach

Our powerful and innovative platform combines cutting edge technology based on machine learning algorithms with our highly skilled resources to produce a best-in-class product set.

Threat intelligence powered by behaviour-based detection proactively reduces the attack surface allowing you to stop cyber attacks before they happen.

“Even if an organisation has excellent cyber security, there can be no guarantee that the same standards are applied by contractors and third party suppliers in the supply chain. Attackers will target the most vulnerable part of a supply chain to reach their intended victim”

UK National Cyber Security Centre, 2018

Securing your Supply Chain

The Challenge

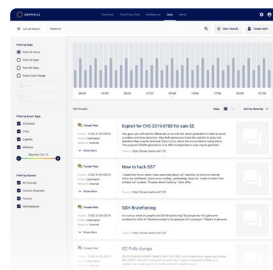

- Are you proactively managing all security threats?
- Do you know which vulnerabilities are likely to be exploited?

Supply chain security has never been so important. As your business grows so does your attack surface as key functions may be outsourced. Every supplier relationship represents a vulnerability. As the larger corporates get better at defending themselves, adversaries are adapting to weaknesses within the supply chain.

High profile breaches are well publicised in terms of financial and reputational damage and supply chain security is becoming an increasing concern for most Board rooms and Executive teams.

The ever-evolving threat landscape is made more complex each time a new supplier or third party is onboarded. Ensuring your own organisation has a robust security posture is not enough as threat actors are targeting smaller suppliers in the chain where there are hidden risks and weak links, widening the attack surface for all organisations in the value chain.

How do you assess your supplier’s cyber risk rating?

The Solution - A scalable, cloud-based subscription to the industry’s most comprehensive threat intelligence platform.

The Orpheus Cyber Risk Rating Platform prevents malicious threat actors from targeting enterprises through exploiting vulnerabilities in supplier networks.

Contextualised knowledge acquired by sophisticated machine learning algorithms enables an autonomous response to emerging attacks no matter where they originate.

Massive amounts of cyber risk data are collated and analysed allowing organisations to detect, investigate and respond continuously in real-time to both the types of threats and level of vulnerability that different companies in the supply chain have.

The Orpheus Cyber risk rating platform empowers security teams to properly monitor the risks that third parties introduce to their operations allowing business leaders to drive innovations across the supply chain.

Why Orpheus?

A scalable approach to resolve cyber risks for you, your supply chain and your partners

Orpheus is the most highly accredited vendor in the industry. Our technology supports Governments and enterprises in highly regulated markets where cyber resilience testing is critical including the UK Financial Conduct Authority and the Bank of England. We are able to scale our Cyber Risk Rating from a single company to your entire supply chain or any third-party company you work with, or are considering a relationship with.

We have strategic partnerships with a number of high profile organisations. Powered by our award-winning technology, our partners can offer their customers best-in-class solutions that improve supply chain security, enhance procurement intelligence and provide supplier due diligence based on cyber risk ratings.

Use the Orpheus Cyber Risk Rating Dashboard to monitor the changing scores to any of your nominated entities. Show return on investment as those companies act on Orpheus' recommendations and become a lower risk of cyber attack.

Benefits

- Minimise your exposure to breaches and stop cyber attacks before they happen
- Helps the Board and C-Level executives shape security investment decisions
- Continuous real-time evaluation of third parties reduces risk across the whole supply chain
- Machine learning powers smarter threat intelligence and delivers the capability to defend more proactively
- Our pioneering technology is trusted by Governments & leading financial institutions operating in highly regulated environments and we are one of the most highly accredited cyber risk organisations in the world providing confidence and peace of mind

Our Accreditations

Every organisation has a different profile.

Orpheus is uniquely positioned to offer a scalable, best-in-class product set based on a new threat-led approach to cyber risk rating. Choose from the tiered options in the product suite to build your own tailored cyber risk management solution.

Option 1 – The Cyber Risk Rating Report

Receive a cost effective, powerful reporting summary on a monthly basis of your live threats and vulnerabilities

Option 2 – Cyber Risk Rating platform

Choose the number of companies you want to monitor and manage risk for across your supply chain and manage these in real-time on one intuitive dashboard

Option 3 – Access to Orpheus' Threat Analysis

Include the Threat Analysis database which incorporates the intentions and capabilities of sophisticated threat actors as well as common vulnerabilities and exposures.

Option 4 – Cyber Threat Intelligence Data

Turn data derived from machine learning algorithms into actionable insights with the Cyber Threat Intelligence dashboard

Option 5 – Your Threat and Risk Platform

Decrease your attack surface and diffuse the risk with the enterprise-level Threat and Risk Platform.
